

FixPlotter

FixPlotter is a complement to PlanePlotter. This software allows to display on demand any of the Airports, Nav aids, Waypoints of the world on the map of PlanePlotter.

Contrary to "Ctrl-F" command in PlanePlotter, showing one point among all displayed points, FixPlotter displays only one or several points according to your choice.
It allows you to create a customized "GPX" file of any of those fixes for displaying in PlanePlotter, but also on Google Earth or any other mapping software.

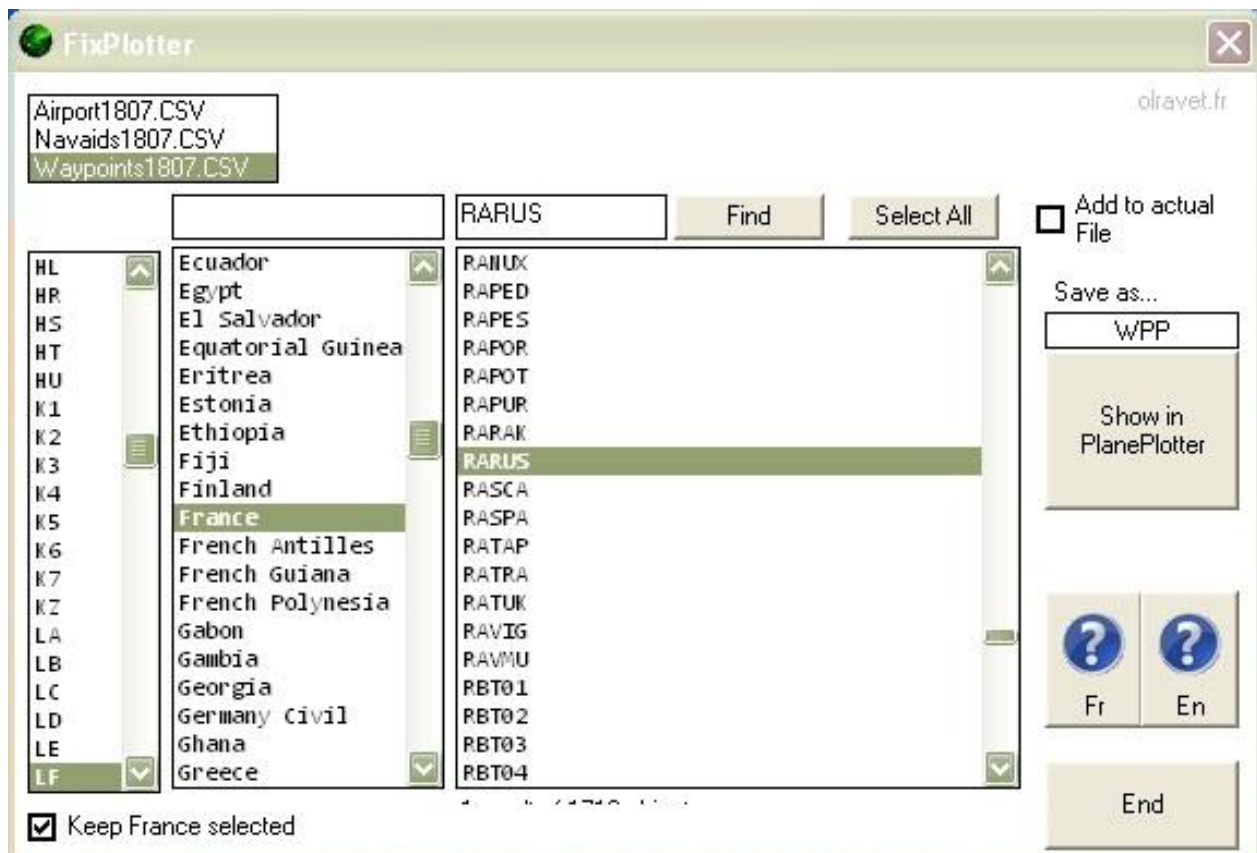

INSTALLATION

***Move "FixPlotter.exe" to the "Chart Files" directory of PlanePlotter:
C:\Tools\COAA\PlanePlotter\Chart Files and create a shortcut on your Desktop.***

LAUNCHING

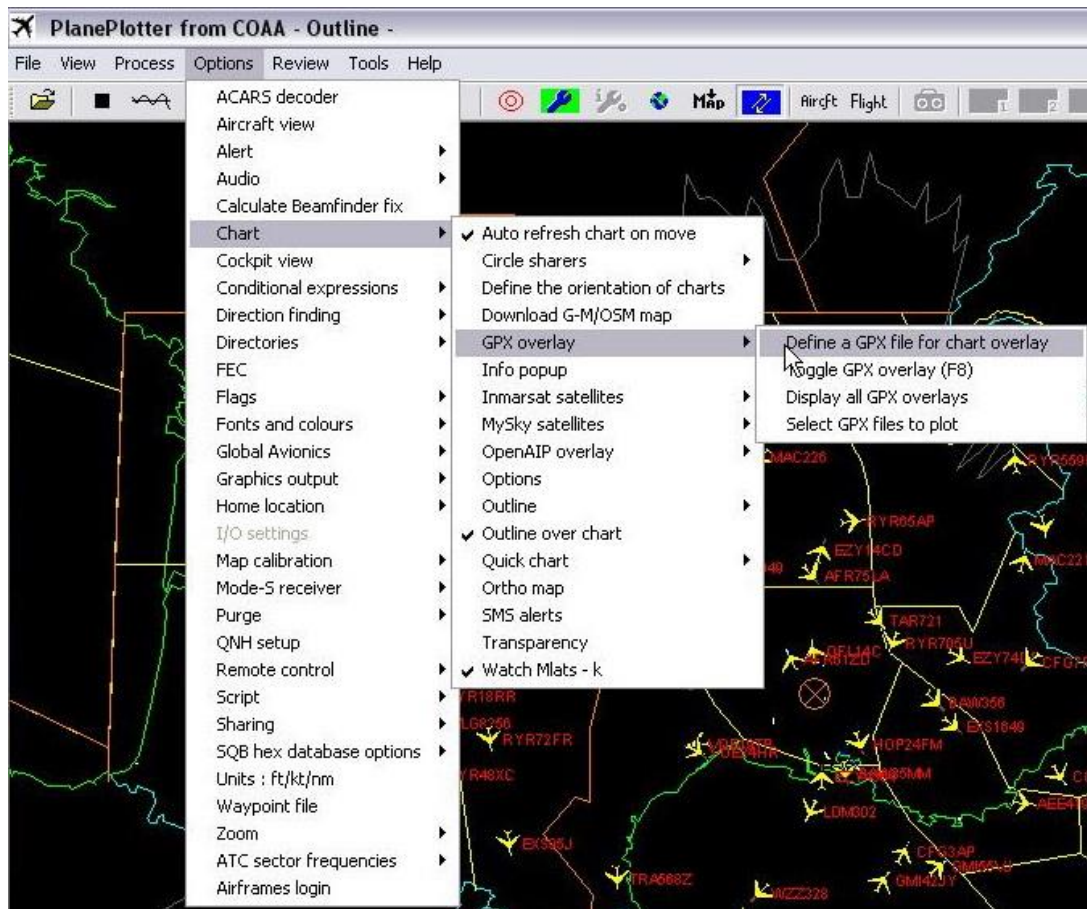

***Launching the application an interface appears, where one choose the type of the fix in its country
We then scroll to find the point, and the click on "Show in PlanePlotter".***

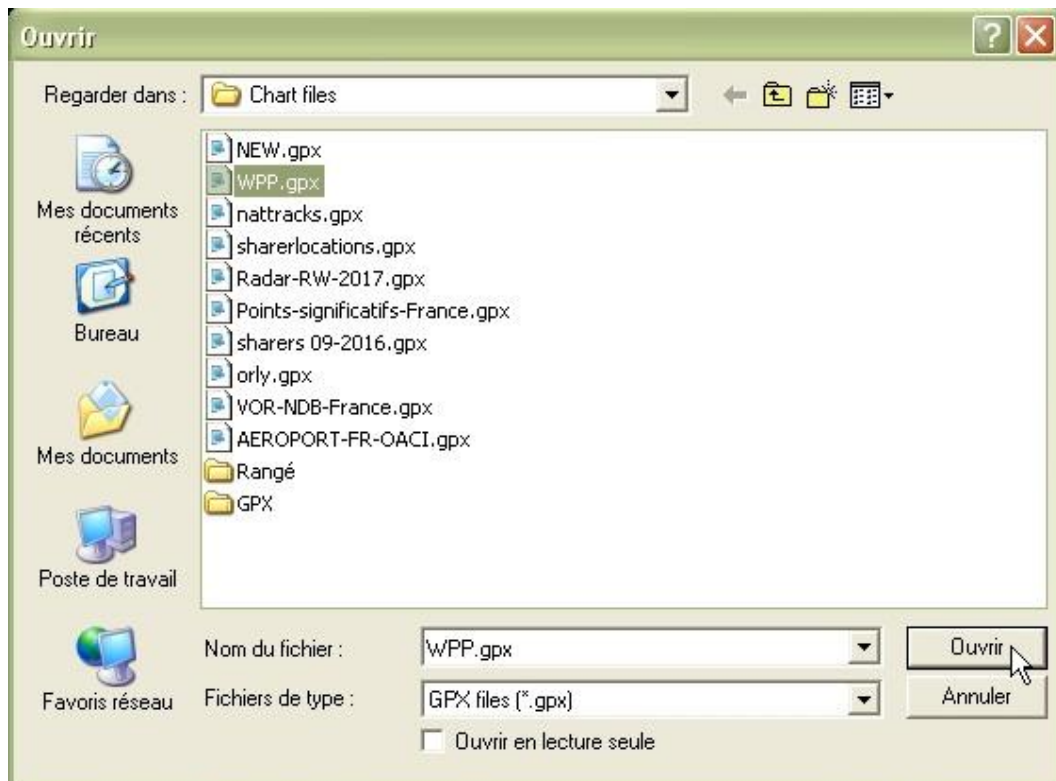

***For the next research in the same country, tick "Keep selected".
The firsts letters of the point (and country) can also be written in the zones left of "Find".***

DISPLAY ON THE MAP

Warning: At the very first use, the point will not appear on the map, it will be necessary to...

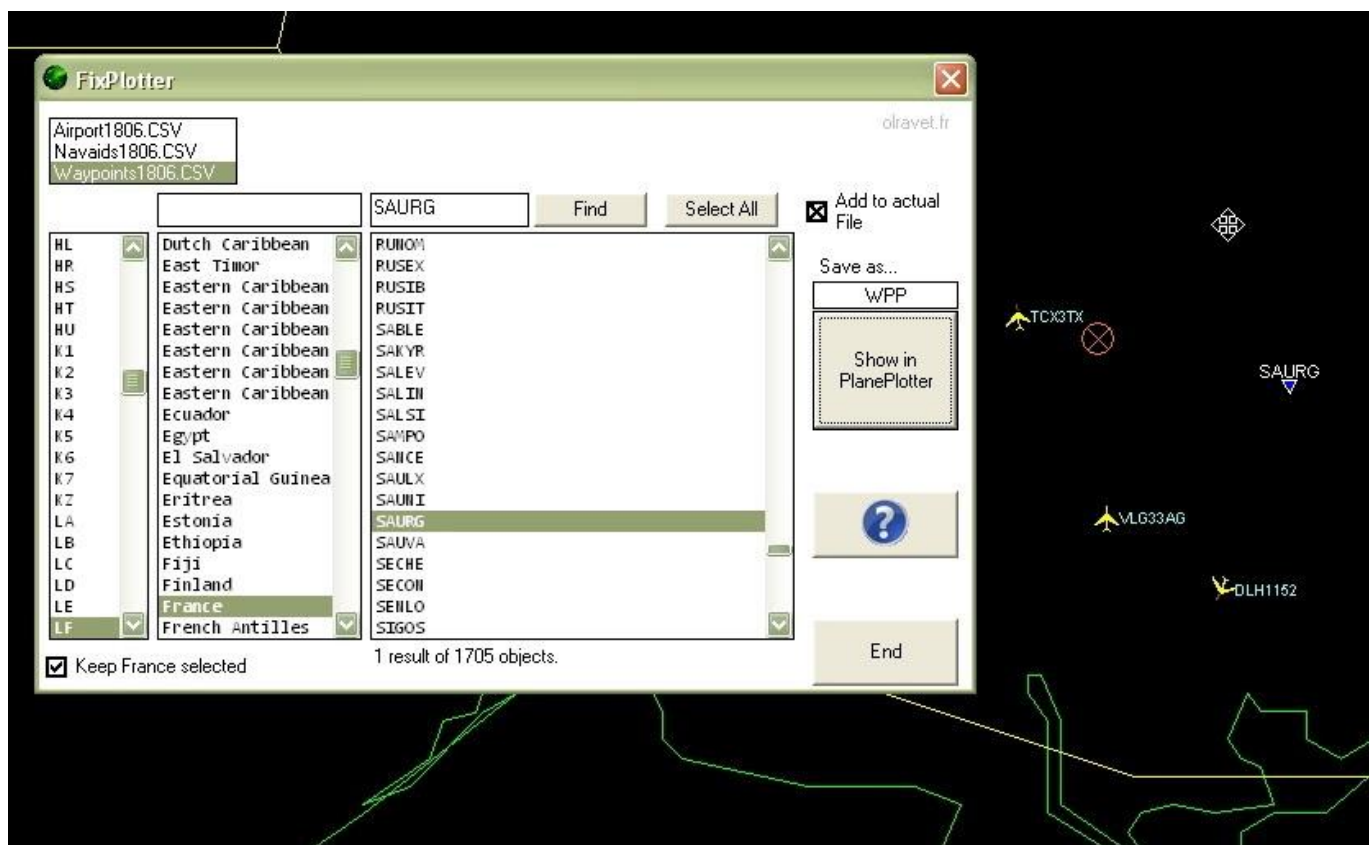

...in "Options / Chart / GPX Overlay / Define a GPX file for chart overlay"

Select WPP.gpx, the file created by FixPlotter.

Unless new manipulation in "Define a GPX...", the choice of a point in FixPlotter will display it on the PlanePlotter map, be careful also to press on "F8" which displays or not the contents of the GPX file.

"Add to actual files" permits to choose simultaneously several or all points with the usual "Ctrl-Click" command if they are separate, or "Select all" on the interface to select the whole.

CREATING PERSONALIZED GPX FILES FOR PLANEPLOTTER AND CARTOGRAPHY SOFTWARE

As described above,

This file (called "WPP.gpx") will then be:

- saved in "Chart Files" renamed or not, and points displayed on demand,
- duplicated and saved elsewhere for opening in mapping software.

This custom GPX file of Airports, Navais, Significant points can be used for displaying in all mapping software Google Earth, Carto Explorer, etc.)

***FixPlotter is a freeware from Olivier RAVET,
with the collaboration of Roland, Radioamateur F 1 GIL. You can copy and share this
software without limit until you don't sell it. Other applications Aeronautical (or not) by
Olivier Ravet: Airports, Airports Codes,
Arinc Decoder, MétéoAero, etc. on his website:
